## Level

The R&S SMA100A has three different modes for level setting:

**NORMAL MODE:** In this mode, the attenuator switches without wear and tear due to the exclusive use of electronic switches. The maximum specified level depends on the installed frequency option (see table below). A typical level overrange up to +20 dBm is available.

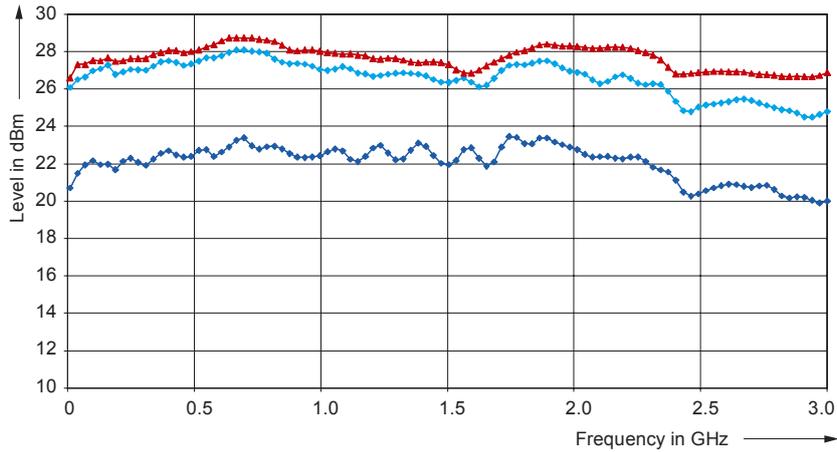

**HIGH POWER MODE:** In this mode, the electronic attenuator is bypassed with mechanical relays for high output power (up to typ. 28 dBm overrange). The typical minimum level is -11 dBm.

**AUTO MODE:** In this mode, the mechanical relay bypass is switched automatically if the set level is higher than the specified max. level in the Normal mode. The output level is specified over the full range from -120 dBm up to +18 dBm.

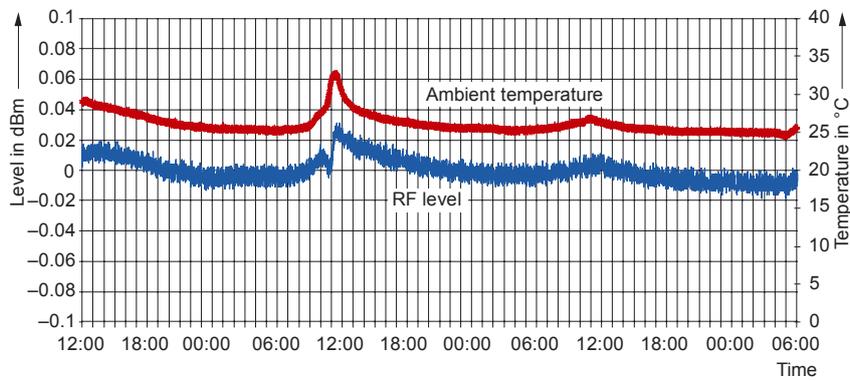

The R&S SMA100A is also available without attenuator (option R&S SMA-B103L).
